When It Comes To Saving Money On Power Bills Your Home Is Like No Other On Earth!

And it deserves special treatment....
 That is why we provide to you an individualized, no-charge, no obligation home energy assessment that evaluates your options and gives you a plan that fits your home and your unique circumstances.
 You can then implement this plan all at once or in a phased approach, as your budget allows.
 Schedule your free assessment now at (919) 872-1114

Our 3 Pronged Approach To HVAC Energy Efficiency

As Warm Air Rises and Leaks Through the Attic It Pulls Cold Air Into The House Below Through Windows, etc.

Effective energy use reduction plans must address the three methods of heat transfer; Radiant, Convective and Conductive. Insulation alone does not adequately address radiant and convective heat flows. (Fiberglass insulation is neither a radiant barrier nor an air barrier.) Our three-prong approach to energy efficiency effectively addresses all three methods of heat transfer. The three “prongs” include:

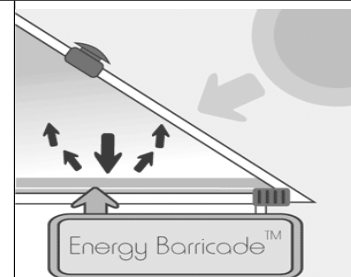

- 1) Air sealing the attic floor and the duct system. This reduces drafts through windows, doors etc.
- 2) Upgrading your current insulation reduces conductive heat losses.
- 3) Addition of our Energy Barricade System to block radiant heat from entering your home in the summer and leaving your home in the winter.

Our trained energy efficiency experts will make sure the job is done right. Call us today at (919) 872-1114

Other Power Saving Options:
 Solar Dynamics Solar Powered Attic Vent: Cool your hot summer attic w/o any energy cost
 Efficient Power Strips: Reduce “Phantom” Loads.
 The Energy Detective: Monitor your daily energy use. See your energy use online
 Energy Efficient CFL Light Bulbs
 Air Cycler: Keep Air Even In All Rooms

Energy Barricade Blocks Radiant Heat In Summer and Winter

We are proud to be partnered with Progress Energy Carolinas. By using a pre-qualified Progress Energy contractor for your energy efficiency projects, Progress Energy customers are eligible for generous rebates on some efficiency upgrades. You can also rest easy knowing that pre-qualified contractors must meet Progress Energy specifications and are under strict quality control.
